### Methodology

This document presents the Ecoprofile of the product designed and made by SENFA. It informs the reader, in a indicative way, about the potential impacts affecting the environment on the whole life cycle of the product. These results are reported to a functional unit (FU) which represents the service provided.

This approach used here follows the directives dictated by the standards ISO 14040-44 and BP X 30-323-24.

The scope of the study takes into account: the fabric and its packaging, the chemicals used during the coating and their packaging, the manufacturing process SENFA, the packaging of expedition, the average distribution, the application and the use, and the end of life of the product with its transport.

The scope of the study does not take into account: the non-toxic chemical components counting for less than mass 1 % of formulation (within the limits of 2 % of total negligence), the activities bound to the R&D and to the marketing, the travel of the employees of the company.

M1

**Product Labeling:**

Oekotex Standard 100

**Carbon footprint labeling:**

SENFA encourages its customers, printers and users, to assess the carbon footprint of their printed items. The label opposite shows you the carbon footprint of our product leaving our factory and including its delivery and theoretical end of life.

**Carbon Footprint\***  
1,64 kg CO<sub>2</sub> eq./m<sup>2</sup>  
 Equivalent to a distance of  
6,39 km by car

*\* without application and use*

**Fossil fuel footprint labeling:**

SENFA encourages its customers, manufacturers and users, to assess the fossil fuel footprint of their items. The label opposite shows you the fossil fuel footprint of our product leaving our factory and including its delivery and theoretical end of life.

**Fossil fuel footprint\***  
20,26 MJ eq./m<sup>2</sup>  
 Equivalent to a consumption of  
79,16 smartphone recharges
